

SSS is an internationally recognised steel stockholder and distributor of Nickel and other Alloys in both solid cut blanks and semi-machined components.

We are aware of the impact that our business activities, and those of the steel industry as a whole, can have on our local and global environment.

SSS Super Alloys realise that we have responsibilities to safeguard the environment, and are committed to:

- Minimising waste products from all processes
- Preventing pollution
- Reducing energy and water consumption
- Complying with all legal requirements
- Continual improvement of environmental performances
- Continue to reduce the environmental impacts of our business and operate in an environmentally responsible manner

We aim to achieve these commitments by:

- Development of an Environmental Management System to meet the requirements of ISO 14001
- Development of environmental objectives and targets
- Including environmental considerations in our Materials Ordering Procedure
- Training all SSS personnel on the requirements of this policy and the Environmental Management System
- Controlling operations to reduce the risk of water and land pollution from oil spillages
- Manage all waste products and consumables, segregating for reuse or recycling wherever possible

The Company Policy is reviewed annually, as part of the management review process and company policy. However, a formal review is undertaken whenever there are any significant changes to legislation or the criteria to which the policy relates.
